Subject: Re: Question about Pedestrian Speed in Project Specification (APCA)
Good catch.

Please use 10 kph.

Subject: Question about Pedestrian Speed in Project Specification (APCA)

Hi Mr. Agnew,

While reading through the Project Specifications, under the Pedestrian description it says the speed of the pedestrian can be either 0 or 6 kph. But, under the Pedestrian Motion Scenarios section, the table "Moving then stopped" has initial speed set to 10 kph.

Should we use the "6 kph" in the scenarios or the "10 kph"??

Thanks,
--Nikhil (Nik) Andrews
